# For setting up Cipher – Ethereum Browser

1. Install Cipher – Ethereum Browser from Google PlayStore or AppStore 2.

Once installed, Open the app and click on the 'Create Wallet' button

3. Accept the Terms and Conditions 4.

Choose an Identicon

5. Save your Recovery Phrase. Write if down or save a snapshot. Then click on the 'I have written it down' button. If it asks you to verify your recovery phrases, you can choose to skip it.
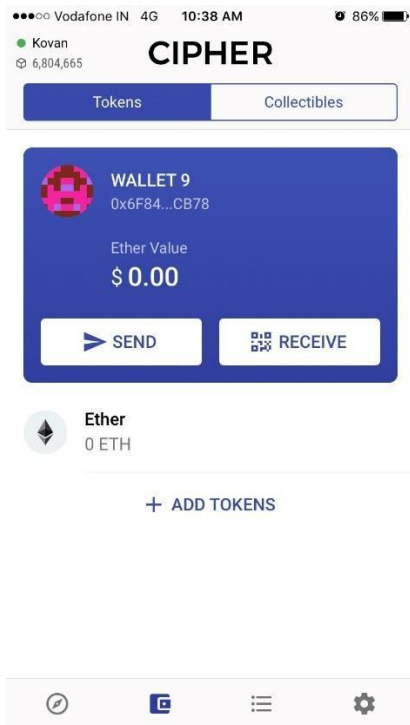

6. Set a passcode or finger print. The app will request for it every time you approve a transaction

7. Click on the Setting Tab and then Click on Network
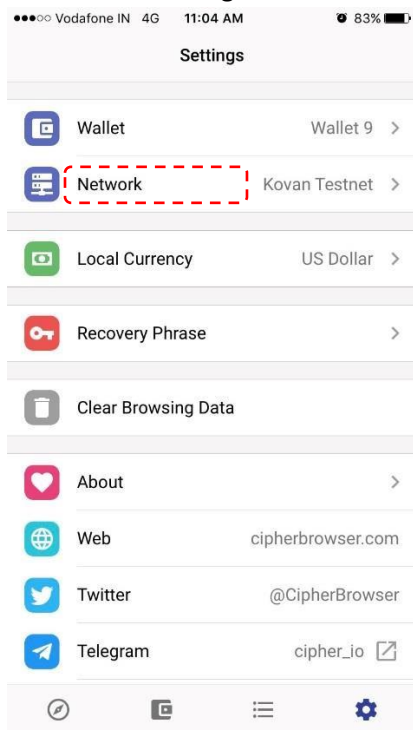

8. Choose Kovan Testnet
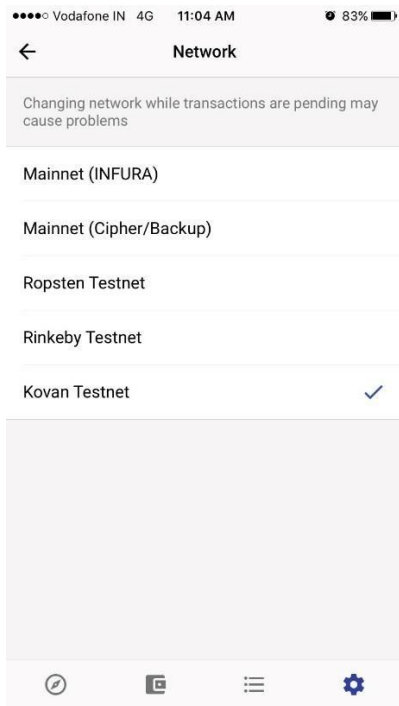

9. Click on Wallet Tab as highlighted below. Then click on the 'Receive' button

10. Click on your Public Key shown below. This will copy it to ClipBoard

0x6F84e6c5DA8Bd8226A154F53E440b
cB3E0CFCB78

11. In Google Chrome or Safari open the link to join our Support WhatsApp group –
http://j.mp/abcfifa.
Ping your public key on our group to request for some Ethers which you will need for every
transaction. Don't worry we wont charge you for that.
If you have a GitHub or Twitter account you can directly request for Ethers from Kovan Faucet at
https://gitter.im/kovan-testnet/faucet

12. Once some Ethers are transferred to your Wallet, you are good to register for our game and
start playing

CRYPTOFIFA App – Register and Play

1. Open Cipher > Click on first tab > In the address box type in abcipl.club
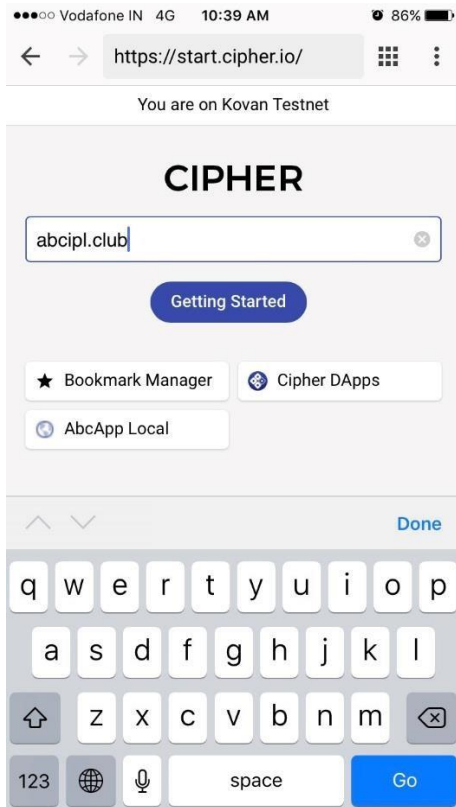

2.   Register yourself on our cryptoFIFA app. Type in your UserName, Full Name and click on Register. Pls note that your key will be populated automatically
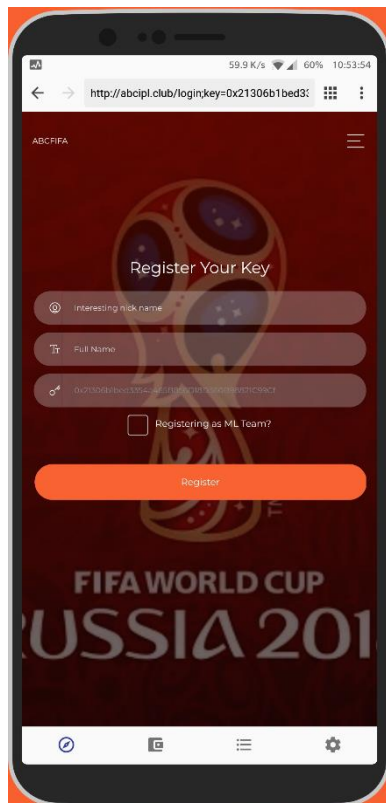

3. Approve the transaction to put it on Blockchain

4. It might take sometime to process the transaction. You can click on the second tab to view the status of the transaction. Once processed you will be redirected to home screen as shown below. If not automatically redirected then please click on the menu on top right and chose 'Back to Home'
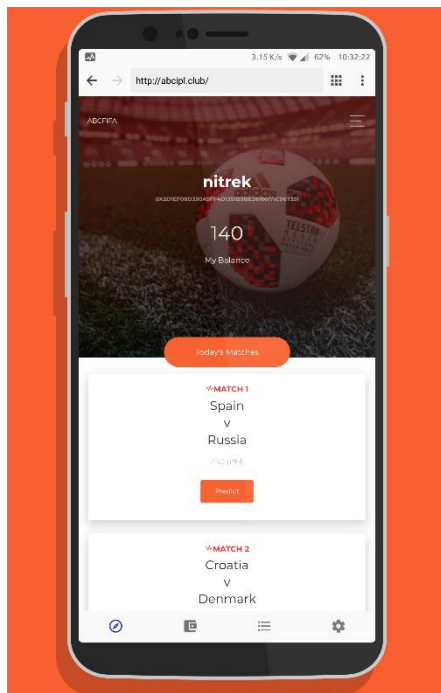

5. Choose a match and click on Predict to go to prediction screen. Fill in your entries and start playing !!!
